## SUMMARY

Passionate and detail-oriented Quality Assurance professional with hands-on experience in manual and automated testing of web applications. Skilled in test case design, test planning, defect tracking, and requirement analysis. Familiar with SDLC and STLC, with practical exposure to tools such as Selenium, Cypress, and TestNG. Adept at collaborating with cross-functional teams, communicating issues clearly, and ensuring high-quality, user-centric software. Driven to continuously learn and apply modern testing practices and automation tools.

---

## EXPERIENCE

### CloudTech Services (Patan, Lalitpur)

**Quality Assurance Engineer**

Jan,2025 – Present

- Worked on insurance domain web applications built on microservices architecture in an Agile environment. Performed manual and automated testing using Selenium, covering functional, regression, and UI testing.
- Designed and executed test cases based on requirements, reported and tracked defects, and collaborated closely with developers for timely fixes.
- Conducted database testing to validate data integrity, backend processing, and API responses against business rules. Actively participated in sprint ceremonies to ensure high-quality and on-time releases.

### CloudTech Services (Patan, Lalitpur)

**Quality Assurance Engineer Intern**

Oct,2024 – Dec,2024

- Performed manual testing of web applications, including test case creation and execution.
- Basic automation tasks using Selenium and performed DB data validation to ensure accuracy and consistency.

---

# PROJECTS

## Insurance Domain System

A microservice-based insurance platform that enables users to enroll in and purchase insurance plans based on eligibility and business rules.

- Performed end-to-end functional testing of enrollment flows for Representatives and Group users.
- Validated insurance business rules, eligibility, pricing, and coverage details.
- Conducted API testing using Postman for multiple microservices, covering positive and negative scenarios.
- Verified email notification workflows and scheduled communications.
- Executed regression, integration, and UAT testing, and managed defects through their lifecycle.

## Service Manager

A centralized third-party service used across applications to validate and manage user contact information.

- Performed API testing for validation of phone numbers, emails, addresses, ZIP codes, SSNs, and OTPs.
- Designed and executed positive, negative, and edge-case test scenarios.
- Conducted integration testing with dependent systems to ensure data accuracy and consistency.
- Verified error handling, data security, and validation rules for sensitive information.

## Plan Configurator

An insurance marketplace that allows users to browse, compare, and configure plans dynamically.

- Tested plan configuration and comparison workflows, including pricing and plan mapping.
- Performed UI and API integration testing to ensure accurate plan data display.
- Executed cross-browser and responsive testing.
- Conducted regression testing for plan updates, pricing changes, and configuration enhancements.
